

PERFORMANCE MONITORING OF METHOD CALLS
AND DATABASE STATEMENTS IN AN APPLICATION SERVER

5 ABSTRACT

 In one embodiment, a method for monitoring performance of one or more methods and one or more database calls each associated with at least one method, includes correlating a database call generated by a method with the method that generated the database call. The method also includes monitoring one or more
10 parameters associated with the database call and displaying to a client a first identifier of the database call, a second identifier of the method that generated the data base call, and one or more of the one or more parameters associated with the database call.
